

PASTELLONE

WHAT IS PASTELLONE?

Pastellone is a covering of base dust alluvial sands, minerals, and natural earth. It is characterized by palpable colors with soft and delicate textures, united to form light rounded-off reliefs.

Pastellone unites different Natural Earths that determine its tonalities. With 2 mm in thickness, it combines the heart of technology and research, resulting in an aesthetically pleasing yet minimal effect, thanks to its natural formulation.

Rapid in laying and unscented, it is ideal for new surfaces as well as for restructuring, directly applicable to internal and external surfaces.

Pastellone is characterized by :

- Resistance to light.
- Scratch resistance
- Incision repellence
- Water resistance
